

Pre-Operative Eyedrop Instructions

Place one drop of each medication in the eye to be operated. If prescribed more than one medication then wait 10 minutes between them. They can be used in any order.

Start the medications the day before the surgery and apply all medications 3 times a day. Morning, afternoon and evening. The next day, the morning of the surgery apply all medications again.

When done properly you will have used all medications 10 minutes apart 4 times (3 times the day before surgery and the morning of the surgery day).

PLEASE NOTE: The doctor will send your prescriptions to your pharmacy by computer one to two weeks before the surgery.
